Tooth development or odontogenesis is the complex process by which teeth form from embryonic cells, grow, and erupt into the mouth. For human teeth to have a healthy oral environment, all parts of the tooth must develop during appropriate stages of fetal development. Primary (baby) teeth start to form between the sixth and eighth week of prenatal development, and permanent teeth begin to form ...

The squamous histology also presents upregulation of the WNT/?-Catenin signaling pathway and downregulation of some chromatin modification factors . These tumors are characterized by several cell layers with irregular borders, protruding intercellular junctions, high eosinophilic cytoplasm and keratin deposition, with denotes a rich and dense ...

[Help - The Human Protein Atlas](#)

Cancer genomics consortia have charted the landscapes of numerous human cancers. Whereas some mutations were found in classical oncogenes and tumor suppressors, others have not yet been functionally studied in vivo. To date, a comprehensive assessment of how these genes influence oncogenesis is lacking. We performed direct high-throughput in vivo mapping of functional variants in an ...
