Major trauma is any injury that has the potential to cause prolonged disability or death. There are many causes of major trauma, blunt and penetrating, including falls, motor vehicle collisions, stabbing wounds, and gunshot wounds. Depending on the severity of injury, quickness of management, and transportation to an appropriate medical facility (called a

trauma center) may be necessary to ...

The health and healthcare needs of a population cannot be measured or met without knowledge of its size and characteristics. Demography is concerned with this essential ‘numbering of the people’ and with understanding population dynamics—how populations change in response to the interplay between fertility, mortality, and migration. This understanding is a pre-requisite for making the ...

A traumatic brain injury (TBI), also known as an intracranial injury, is an injury to the brain caused by an external force. TBI can be classified based on severity (ranging from mild traumatic brain injury [mTBI/concussion] to severe traumatic brain injury), mechanism (closed or penetrating head injury), or other features (e.g., occurring in a specific location or over a widespread area).
